

arena vision

Combining stylish, compact design with high-precision engineering, ArenaVision is a best-in-class system for sports and city floodlighting applications. The use of a high-power, compact double-ended lamp, together with the choice of seven different precision optics, ensures that the light is cast exactly where it is required. The razor-sharp cut-off characteristics of the reflector system reduce spill light and/or light pollution to a bare minimum. Arena Vision is ideal for the illumination of bridges, towers, churches, etc., or for accent lighting of monuments, statues and the like.

materials:

- high-pressure die-cast aluminium
- stainless steel clips
- ceramic glass protected by a grid for uplighting
- hot dipped galvanized steel bracket, painted black

options:

- seven different beams
- louvre
- colour filter

suitable lamp types:

- MHD 1800 W (403 only)
- MHN(D)-TD
- MHD 2000 W

luminaire specifications:

- IP 65
- class I
